

Characteristics of the submitted research/ artistic/other output

Name and surname doc. Mgr. Bc. Eva Urbanová, PhD.
 Document type: Characteristics of the submitted research/ artistic/other output
 The name of the university Comenius University Bratislava
 The seat of the university Šafárikovo námestie 6, 818 06 Bratislava

OCA1. - Surname awarded to the assessed person	Urbanová
OCA2. - Name awarded to the assessed person	Eva
OCA3. - Degrees awarded to the assessed person	doc. Mgr. Bc. PhD.
OCA4. - Hyperlink to the entry of the person in the Register of university staff	https://www.portalvs.sk/regzam/detail/3544

1st evaluated output

OCA5.1 - Area of assessment	nursing and midwifery HIC; midwifery 1st degree
OCA6.1 - Category of the research/ artistic/other output	scientific output
OCA7.1 - Year of publication of the research/artistic/other output	2021
OCA8.1 - ID of the record in the Central Registry of Publication Activity (CRPA) or the Central Registry of Artistic Activity (CRAA)	428666
OCA9.1 - Hyperlink to the record in CRPA or CRAA	https://app.crep https://app.crepc.sk/?fn=detailBiblioForm&sid=5876D3910D995ABAE96E33C99E
Title of the publication to which the hyperlink points	The Association between Birth Satisfaction and the Risk of Postpartum Depression
RATP coefficient	A+
Justification of the RATP	original paper in relevant research area with quartile Q1, cited

OCA18.1 - Characteristics of the output's impact on socio-economic practice

Negative experiences with childbirth can affect a woman's overall health, including a higher risk of postpartum depression. The aim of the study was to find out the relationship between satisfaction with childbirth and the risk of postpartum depression (PPD). A 30-item version of the Birth Satisfaction Scale (BSS) scale and the Edinburgh Postnatal Depression Scale (EPDS) scale were used to determine the relationship between birth satisfaction and the risk of postpartum depression, and the Perceived Stress Scale (PSS) was used. The study included 584 women (mean age 30.6 ± 4.9) between 2-4 days postpartum. There was a correlation between the level of birth satisfaction and the risk of developing PPD, so a lower level of satisfaction with childbirth was a significant predictor of a higher risk of PPD.

OCA19.1 - Characteristics of the output and related activities' impact on the educational process	The study was created within the VEGA project and its results can be used in the educational process of midwifery to improve the quality of care and prevention for pregnant women and mothers.
2nd evaluated output	
OCA5.2 - Area of assessment	nursing and midwifery HIC; midwifery 1st degree
OCA6.2 - Category of the research/ artistic/other output	scientific output
OCA7.2 - Year of publication of the research/artistic/other output	2018

OCA18.2 - Characteristics of the output's impact on socio-economic practice	The study describes the author's creation of virtual patients for the needs of midwifery in the Open Labyrinth platform. Based on experience, he draws attention to the pitfalls of professional creation of virtual patients as an innovative form of the educational process in the midwifery study program. It deals in detail with the individual steps of the creative process and draws attention to the use of virtual patients as an alternative to classical full-time teaching.
OCA19.2 - Characteristics of the output and related activities' impact on the educational process	The study was created on the basis of a pedagogical project that directly dealt with the innovation of the educational process for the needs of the midwifery study program.
3rd evaluated output	
OCA5.3 - Area of assessment	nursing and midwifery HIC; midwifery 1st degree
OCA6.3 - Category of the research/ artistic/other output	scientific output
OCA7.3 - Year of publication of the research/artistic/other output	2019
OCA8.3 - ID of the record in the Central Registry of Publication Activity (CRPA) or the Central Registry of Artistic Activity (CRAA)	143737
OCA9.3 - Hyperlink to the record in CRPA or CRAA	https://app.crepc.sk/?fn=detailBiblioForm&sid=922D20CCC953BCA4FE24AEF592
Title of the publication to which the hyperlink points	Women's satisfaction with the activities performed by a support person during birth
RATP coefficient	A
Justification of the RATP	original paper in relevant research area
OCA18.3 - Characteristics of the output's impact on socio-economic practice	The main aim of the study was to find out the overall satisfaction of the mothers with the support person who accompanied them during childbirth. It focused on the social support provided by close family members and friends of the mother and on the activities that these people should provide to the mother in the process of childbirth. The results of the study predict that the presence of a supportive person, mostly a birth partner, is extremely important for a woman. Women are satisfied with the very presence of the support person, regardless of whether the support person carries out an activity or not.
OCA19.3 - Characteristics of the output and related activities' impact on the educational process	The study represents a part of the final work in the study program midwifery, bachelor's degree, under the guidance of the main author. Its results are directly applicable in improving the practice of midwifery.

OCA18.4 - Characteristics of the output's impact on socio-economic practice	The aim of the study was to analyze the risk of postpartum depression using the dimensions of perceived support (informational, emotional and physical), prenatal preparation (satisfaction) and attitude towards pregnancy (wanted or unwanted). This was a cross-sectional study that included 584 women after childbirth in two university maternity hospitals in Slovakia. The Edinburgh Postnatal Depression Scale (EPDS) was used for the research. Descriptive statistics and analysis of variance, as well as logistic regression, were used to process the results. The associations found were adjusted for level of education, type of birth, psychiatric history and age. Prenatal education, especially satisfaction with it, showed a negative correlation with the level of EPDS score. No significant differences were found in levels of depression with respect to attitude towards pregnancy and perceived support. The study pointed out the importance of prenatal preparation and education with respect to reducing the risk of postpartum depression.
OCA19.4 - Characteristics of the output and related activities' impact on the educational process	The study was created within the VEGA project and its results can be used in the educational process of midwifery to improve the quality of care and prevention for pregnant women and mother.

OCA18.5 - Characteristics of the output's impact on socio-economic practice	The monograph focuses on the latest knowledge in the field of home nursing care. It is intended primarily for professionals in community nursing and midwifery. It is highly professionally oriented to individual areas of home nursing care, which are elaborated in detail for the needs of direct use in practice. With its specific focus, it contributes to the improvement of home nursing care in the Slovak Republic.
OCA19.5 - Characteristics of the output and related activities' impact on the educational process	The publication is used directly in the master's study of midwifery, as well as in improving the qualifications of nurses and midwives in community care.
Date of last update	20.03.2025
