Subject: **Pre-state Examination Practice – Surgery 3**

Extent: **7 weeks – 280 hours (8 hours/day)**

Year of Study: **6th year**

ECTS: **12**

The goal of the pre-state examination practice in surgery is to acquire and deepen the theoretical and practical knowledge necessary for the work of a junior doctor (resident) at a surgical department, surgical ICU, and surgical outpatient clinic.

As part of the pre-state block practice, the student performs practical activities under the guidance of an attending physician within the scope of a junior doctor's duties, specifically:

1. Completion of the pre-state examination practice in its full 100% extent (7 weeks) at the surgical workplaces of the Martin University Hospital (MUH) according to the internal schedule and curriculum for the subject of Surgery, i.e.:

- 3 weeks at the Clinic of General, Visceral, and Transplant Surgery
- 1 week at the Clinic of Anesthesiology and Intensive Care Medicine
- 1 week at the Department of Plastic Surgery
- 1 week at the Department of Vascular Surgery
- 1 week at the Clinic of Thoracic Surgery

2. Completion of **5 weeks** of pre-state examination practice **outside the surgical workplaces of MUH**, based on the student's request and the guarantor's acceptance of said request, provided the student fulfills the activity set by the guarantor at a workplace capable of ensuring an adequate scope of mandatory clinical practice; and **2 weeks at the surgical workplaces of MUH in Martin** according to the internal schedule and curriculum for the subject of Surgery.

During the stay at the surgical department and ICU, the student performs the following medical procedures under the supervision of an attending physician:

- Bedside rounds, maintaining medical records, proposing diagnostic and therapeutic procedures, and participating in consultation examinations.
- Rounds with the Head Physician of the department.
- Initial examination of the patient and writing the admission report.
- Patient discharge and writing the discharge summary.
- Measurement of vital signs and assessment of the patients' objective status.
- Independent evaluation of laboratory results and auxiliary examinations.
- Independent evaluation of imaging findings (X-ray, USG, CT, MRI, ERCP).
- Insertion of gastric tubes, permanent urinary catheters, and I.V. cannulas.
- Dressing of surgical wounds, extraction of drains, sutures, and venous catheters.
- Assisting with the administration of blood transfusions and infusion therapy.
- Cardiopulmonary resuscitation and defibrillation.
- Assistance or observation of surgical procedures within the prescribed scope.
- Consultation seminars on selected topics are part of the practice. Through an active approach, the student utilizes their knowledge to consult on current clinical problems.
