

Mariott's trial (examination of blind spot)

Mariott's trial may prove the existence of blind spot (Fig. 1).

Fig. 1.

In direct observation of the cross from the distance of 20 cm by right eye (in closed left eye), we don't see the white circle on the right side of the picture.
If we observe the circle by left eye (in closed right eye), we don't see the cross on the left side of the picture.
